Re: Product Purity and Source

This memorandum confirms that all sugar sold by United Sugars meets FDA regulations as food grade product for human consumption, is produced under current Good Manufacturing Practices as mandated by the Federal Food, Drug and Cosmetic Act and complies with the ICH/FDA guide Q3C for Residual Solvents.

Over the past four years, all of the sugar sold by United Sugars Corporation was produced in the United States and processed in the United States. In order to assure reliable supply to customers, we may, from time to time find it necessary to sell sugar produced from sugar cane grown outside the United States. In the event, this occurs; available materials and vendors would go through our vendor approval program.

Every manufacturing facility that is part of United Sugars Corporation maintains a documented HACCP plan.

Sugar sold by United Sugars Corporation meets Food Chemical CODEX standards for sucrose and is not less than 99.85% pure. As such, there can be no additives, preservatives, residual solvents or other ingredients. United Sugars' purity levels typically exceed 99.95%.

Regarding brown and powdered sugar products - the corn starch used in powdered sugar and the molasses syrup used in brown sugar are produced in the United States and meet all government and industry standards for food grade products. Granulated, powdered and brown sugar products are packaged in bags that meet all government and industry standards for materials meant to come in direct contact with food.

Please call or write if you have any questions or concerns. United Sugars Corporation is committed to continued service to our valued customers.
